About Asthma 1-2-3

Asthma continues to be the leading cause of school absenteeism among all chronic diseases. You can make a difference by becoming an Asthma 1-2-3 Facilitator. This in-service was designed by the American Lung Association of the Midland States to teach basic asthma knowledge in community and worksite settings, to improve the lives of children who are living with asthma. Certification is available to all health educators, nurses or respiratory therapists with advanced training* in asthma education.

*Certified asthma educators or completed ALA Asthma Educator Institute, the MSRC Asthma Information Review course, or the CDC National Asthma Training Curriculum.
